

## Pest Be Gone Solutions

Hi Everyone,

Firstly we would like to say hello to all our new and existing clients as this is our first newsletter.

Isn't it funny how from year to year the seasons change and so do the pests. This time last year we were busy treating homes for rodents as the rain and cooler nights hung around you found that the mice and rats did too.

But this year the warmer weather has kicked in early and so with that the breeding season starts.

Remember to get on top of your general pest control early this year to avoid getting and infestations.

Call us today on 1800 Pest Be Gone (1800 737 823 ) or go to our website and book online with our booking form. We are ready for the busy season that is just around the corner, but are you?

This spring we would like you to spread the word about our great services to your family, friends and neighbours, for them to receive 15% off a combination of treatments. Also a Small Gift will be mailed to you as a token of your appreciation.

\*For services booked before the 1<sup>st</sup> November 2014 using the code word "Spiders"\*

### **Our Spring Pest Focus**

#### **Spiders**

There are more than 35,000 different types of spiders found around the world, a few thousand of which are found in Australia and that's including some of the most dangerous species.

## NEWSLETTER – SPRING 2016

While spiders can be very beneficial around your home, ridding you of many common insects around the house and in the garden, they can also pose a significant threat to your children and pets.

Spiders can be attracted to small warm, dark spaces, such as cracks in walls, corners, air vents, and the eaves of your home but on the other hand some species prefer to stay closer to nature, weaving their webs in your garden.

#### **Treatment process**

An effective way to control spiders around your home is knowing that they are predators. Spiders primarily consume other insects, so if you reduce the amount of insects in and around your home, most spiders will be less interested in hanging around and need to source their food from elsewhere.
